

2731TRUC-99

# 1999 C/K PICKUP

K1500 4x4 Silverado Extended-Cab Short-Box

K3500 4x4 Silverado Crew-Cab

### WHAT C/K PICKUP IS

With a massive 526,960 units sold in 1996 (calendar year), C/K Pickup is not only the biggest selling nameplate at Chevrolet, but the second largest seller in the entire country — truck or car.

To be that popular, C/K Pickup needs to be many things to many different buyers. For work use, it is extremely capable with a wide array of available powertrains, bed sizes, axle choices, payloads and trailering capacities. For even wider choice, C/K Pickup can be bought in Regular-, Extended-, Crew- or Chassis-Cab models, in two- or four-wheel-drive configurations and in three payload

ranges. It also is available with a host of comfort and convenience features which are becoming increasingly popular with new-truck buyers — items like Custom Leather seating surfaces, a CD player, Remote Keyless Entry and a useful third door on select Extended-Cab models.

Whether used for commuting or hauling, one thing C/K Pickup is to all buyers is reliable. Simply put, C/K Pickup is the most dependable, longest-lasting truck on the road. Dependability based on longevity: 1986–1995 full-line light-duty truck company registrations. Excludes other GM divisions.

### C/K Pickup/Chassis-Cab Models

- C/K1500 Regular-Cab
- C/K1500 Extended-Cab
- C/K2500 Regular-Cab
- C/K2500 Extended-Cab
- C/K2500 Regular/Chassis-Cab
- C/K3500 Regular-Cab
- C/K3500 Extended-Cab
- C/K3500 Crew-Cab
- C/K3500 Chassis-Cab
- C/K3500 Crew-/Chassis-Cab
- C3500 HD Regular-Cab/Chassis-Cab

### What's New

#### Interior

- PassLock theft-deterrent system, now available for increased anti-theft protection (page 4)

#### Exterior

- Three new exterior colors: Indigo Blue Metallic, Light Pewter Metallic and Dark Copper Metallic (page 7).

#### Performance

- 4L60-E and 4L80-E automatic transmission enhancements for increased durability and customer satisfaction (page 11)
- Lighter front halfshafts on four-wheel-drive models for improved serviceability (page 13).
- Reduced tire rolling resistance on C1500 models (page 14).

## 1997 Awards

- A "Best Buy" Recommendation (Pickup Truck Category) — *Consumers Digest*.
- Best Bet for 1997, Light-Duty Trucks — *Sacramento Bee*.

## Competitors

C/K Pickup competes in the hotly contested, full-size pickup segment. Competitors include:

- Ford F-Series
- Dodge Ram
- Toyota T-100

## G/K Pickup Spokespeople

Chevy is proud of the spokespeople who exemplify what Chevy Truck stands for:

- Cal Ripken, Jr. — Baseball's newest ironman, who holds the record for playing the most consecutive games. Dependable and durable, he is a natural spokesman for Chevy Truck.
- George Strait — A popular figure in the country music scene since 1981. He exemplifies the same dependable, long-lasting traits as Chevy trucks do.
- U.S. Ski Team — A talented group of athletes who prove their competitiveness whenever they hit the slopes. Chevy will be a major sponsor of World Cup and National Championship events.

## C/K TRIM PACKAGES

All C/K Pickups have a long list of standard features, including:

- Dual air bags (except on vehicles with GVWR at or above 8,600 lbs.)
- Daytime Running Lamps
- 4-wheel anti-lock brakes
- Variable-speed intermittent wipers
- Dual in-dash cup holders
- Dual covered auxiliary power outlets
- Dual black foldaway exterior rearview mirrors
- PassLock theft-deterrent system
- Aluminized stainless-steel exhaust system.

The specially contented W/T1500 Work Truck Package, available for C/K1500 Regular-Cab only. This trim level adds the following standard equipment, in addition to the above standard features.\*

- Vinyl bench seat only
- Full black rubber floor covering
- Available only with Vortec 4300 V6 SFI engine
- Available with Fleetside, Short- or Long-Box
- AM/FM stereo.

\*Additional option availability is limited with the W/T1500 Package.

The Cheyenne Trim Package is the base-level trim for all three series of C/K models. This trim level adds the following standard equipment, in addition to the above standard features:\*\*

- Color-keyed rubber floor covering
- Passenger assist handles
- Scotchgard™ Protector on cloth surfaces
- Full Vortec and Turbo-Diesel V8 engine availability (varies by series)
- AM/FM stereo
- Rear-quarter, swing-out windows on Extended-Cab only
- Standard vinyl, optional cloth interior trim
- Scotchgard™ Protector on cloth surfaces
- AM/FM stereo radio
- Chrome front bumper.

\*\*Some features may differ according to model.

The Silverado trim level adds the following standard equipment, in addition to or replacing Cheyenne features:\*

- Custom Cloth full-bench seat
- Door trim panels with cloth inserts
- Color-keyed carpeting
- Power lumbar driver and front-passenger seat adjustment
- Air conditioning
- Power windows and door locks
- AM/FM stereo with cassette player
- Chrome front bumper with black rub-strip
- Chrome rear bumper with step-pad
- Body-side and wheel-lip moldings
- Bright deluxe grille with dual composite halogen headlamps
- Electric remote below-eyeline mirrors.

\*Some features may differ according to model.

## PICKUP NOMENCLATURE

Terms used to differentiate pickup models can be confusing. Here are the explanations for commonly used Chevy Pickup nomenclature:

- C/K — The "C" refers to two-wheel-drive models and the "K" refers to four-wheel-drive models
- 1500/2500/3500 — These model designations apply to the traditional method of rating pickups by payload capacity (1500 would be a 1/2-ton, 2500 would be a 3/4-ton and 3500 would be a 1-ton). This classification system is not in formal use today, but the model number can guide buyers to how heavy-duty a model is
- Cab designations — A Regular-Cab seats three people and has two doors. The Extended-Cab features a rear bench seat and can have two or three doors. A Crew-Cab features a rear seat and four doors — much like a passenger sedan. A Chassis-Cab refers to a truck chassis supplied with a cab, but without the cargo bed. These are usually upfitted for such purposes as ambulances or delivery vehicles, and can come as Regular- or Crew-Cab models

- **Cargo boxes** — Cargo boxes come in two lengths: Short-Box (78.8 inches long) and Long-Box (97.6 inches long). The boxes also come in the choice of Fleetside (standard cargo box) and, in the shorter length only, Sportside (features a step on the outside of the box, forward of each rear wheel).

## SAFETY

General Motors has a long history of leadership in automotive safety research, development and testing. While the federal government specifies a variety of safety tests for vehicles, GM goes beyond those guidelines to help ensure high levels of vehicle safety for GM owners. GM works hard to help keep your family safe by performing more tests, with many different-size test dummies, than are required by the government. GM is the research and engineering leader in developing technology that helps Chevrolet owners avoid collisions and helps protect them in the event a crash occurs.

### Crash Avoidance Features

- **Standard four-wheel anti-lock brake system (ABS)** helps maintain steering control and minimizes wheel lockup on most slippery surfaces.
- **Standard Daytime Running Lamps** make the vehicle more visible during daylight hours.
- **Horn** can be operated by pressing anywhere on the steering wheel hub pad covering the air bag — the location most drivers expect to find the horn.
- **Brake/transmission shift interlock** (automatic transmissions) prevents the vehicle from being shifted out of Park without first depressing the brake pedal.
- **Starter interlock switch** (manual transmissions) prevents the starter from engaging unless the clutch pedal is depressed.

### Occupant Protection Features

- **Standard driver air bag and right front-passenger air bag** (vehicles under 8,600 GVWR), designed for use with safety belts, help protect the driver and front passenger in the event of a moderate to severe frontal impact. A switch deactivates the passenger-side air bag when using a rear facing infant carrier in the front seat in Regular- and Extended-Cab models.
- **The safety belt warning lamp** remains activated for 75 seconds, or until the driver's safety belt is fastened to encourage safety belt use. Unfastening the safety belt with the ignition on reactivates the warning system.
- **Front and rear crush zones**, designed into the front and rear of the frame, are designed to help absorb energy by deforming in a controlled manner during a crash.
- **Laminated windshield safety glass** helps prevent shattered glass from entering the passenger compartment.
- **Energy-absorbing steering column** can help reduce crash forces to the driver, should an accident occur.
- **Front outboard head restraints** help prevent head and neck injuries in the event of a collision.
- **Manual lap/shoulder safety belts** are located at outboard positions and lap safety belts at center positions. Includes height adjusters at outboard positions, which allow the safety belt to be positioned correctly for occupants of different sizes. Height adjusters also encourage safety belt use by making them more comfortable to wear.

### ABS — Unlearning Old Habits

Buying a vehicle with 4-wheel anti-lock brakes might require drivers unfamiliar with this feature to “unlearn” braking habits.

Drivers, accustomed to traditional brake systems, have been taught to pump the brake pedal when braking hard at high speed to help prevent the vehicle's wheels from locking up. With ABS, pumping renders the system ineffective. The system was designed to pump the brakes faster than is manually possible, automatically controlling the brake pressure at each wheel, independently, to minimize wheel lockup. Drivers might not realize that the pulsating feedback that often accompanies ABS operation is normal. To become familiar with the system, drivers should take the vehicle to an unoccupied parking lot (preferably one with slick pavement) and practice sudden hard braking maneuvers to get a feel for the system. Reviewing the ABS video supplied with the vehicle is also a good idea.

Another old habit buyers may need to unlearn is the habit of thinking 4-wheel ABS is an expensive option. It's not on C/K Pickup — in fact, it's standard. Unfortunately, buyers of Dodge Ram, Ford F-Series and Toyota T-100 trucks can't say the same.

## C/K Pickup And Evan Evans: Two Winners

What happens when someone suffers a terrible auto accident that leaves them a paraplegic? Do they just give up? Not if that person is Evan Evans — he goes racing! Despite the loss of the use of his legs, Evans dove back into the racing world that he loved by building a modified Chevy Blazer for off-road competition. From there, Evan moved to a specially equipped Chevy Pickup and successfully raced in the popular SODA (Short Course Off-Road Driver's Association) off-road series. Starting in the 1996 season, of the eight races he participated in, Evans claimed seven victories in his class and one second-place finish. And that's not all. He also won the Class 13 Championship title and became the winningest truck class driver in SODA history.

Chevrolet is proud to have Evan Evans Racing as a member of the Chevy Thunder off-road motorsports team. Chevrolet is also pleased that this busy 1996 SODA "Driver of the Year" has managed to find the time to join Chevrolet as a spokesperson for GM's Mobility Program. The Mobility Program reimburses persons with disabilities up to \$1,000 toward the purchase of adaptive equipment for their vehicles (see page 14 for more information). Of course, racing equipment is extra.

## C/K PICKUP INTERIOR FEATURES

The C/K Pickup interior brings a high level of comfort and convenience to the full-size truck segment. The Cheyenne trim level offers a comfortable work environment, yet retains the rugged construction that's needed in a hardworking truck. The uplevel Silverado trim level adds more comfort and convenience amenities for buyers who also use their vehicles for personal use.

The available third door brings a high level of convenience to C/K1500 Short-Box Extended-Cab Silverado models (requires Vortec 5000 V8 or Vortec 5700 V8 SFI engine). This handy passenger-side third door opens up to a real back seat and makes it easy to load passengers, pets or cargo into the rear-seat area, as well as providing an ideal place to place items like a wheelchair for those with disabilities.

- The third door has a steel beam, double-striker plate and welded construction for extra strength. It also includes a convenient interior storage compartment in the lower portion of the door and a swing-out window.
- Rear-seat heat ducts are standard on Extended-Cab and Crew-Cab models for improved passenger comfort.
-  PassLock vehicle theft-deterrent system is now standard on all C/K Pickup models for extra protection.

PassLock will not allow the vehicle to run unless the proper key is used. If an improper key is used, the vehicle will not start for up to 10 minutes, even if the proper key is subsequently inserted.

- Illuminated entry feature keeps the dome lamp on for 20 seconds after the last door is closed (40 seconds for vehicles equipped with optional Remote Keyless Entry). The delay is canceled when the ignition switch is turned to the "ON" position.
- Two auxiliary 12-volt power outlets are convenient power sources for cellular

phones and other electronic accessories. The power ports are concealed by spring-loaded doors. The standard cigarette lighter can provide a third power source.

- The ergonomically designed instrument panel on C/K Pickup trucks features easy-to-operate controls. It includes two backlit switches for added nighttime visibility and a choice of advanced audio systems. In addition to the fuel gauge and speedometer, the standard instrument cluster gauge package includes these gauges to keep the driver fully informed of operating conditions:

- Coolant temperature
- Oil pressure
- Tachometer
- Trip odometer
- Voltmeter.

## Comfort And Convenience Features

- Rotary controls for the heater/ventilation/AC system are easy to operate, even when wearing work gloves.
- Large door handles are easily grasped while wearing gloves.
- Two standard slide-out cup holders and a storage bin are included on the instrument panel.
- Standard molded armrests, convenient map pockets and speakers are contained within the door trim panels.
- Console (included with optional high-back bucket seats) has a pivoting writing surface on top of the lid, a map pocket on the underside of the lid, cassette tape storage or a removable cup holder insert and a removable coin holder. In Extended Cab models, the console also includes a latching rear storage drawer and two slide-out cup holders for rear-seat passengers.
- Passenger assist handles are standard to make entry and exit easy.
- Scotchgard™ Protector is applied to all cloth seats, door panels and carpeting to resist stains and make cleanups quick and easy.

## INTERIOR FEATURES (contd)

- **Air conditioning** with CFC-free refrigerant (standard on Silverado, optional on other C/K Pickup models).
- **Intermittent wipers** (standard on all models) allow the driver to match wiper speed to weather conditions.
- **Tilt-Wheel™ Adjustable Steering Column** (standard on Silverado, optional on all other models) adjusts to a comfortable position for a wide range of drivers.
- **Remote Keyless Entry** system uses a key fob to activate remote locking features and illuminated entry (optional on Silverado only).
- **Single two-sided key** operates ignition and doors, eliminating the need for two separate keys.
- **Padded sunvisors**, standard on all models, include driver-side elastic storage strap and passenger-side vanity mirror. (Silverado Crew-Cab sunvisors have sliding extensions and dual illuminated mirrors.)
- **Rear seat** on Extended-Cab models folds down to make a flat load floor. The bottom cushion also folds up to create more cargo room.

## Audio Systems

A family of sophisticated audio systems transforms C/K Pickup into a mobile concert hall. The available sound systems are:

- **ETR (Electronically Tuned Receiver) AM/FM stereo** with digital clock, preset-scan and four speakers — standard on W/T1500 and Cheyenne.

- **ETR AM/FM stereo with auto-reverse cassette player**, digital clock, preset-scan and four speakers — standard on Silverado and optional on W/T1500 and Cheyenne.
- **ETR AM/FM stereo with auto-reverse cassette player**, automatic tone control and six speakers — optional on Silverado. Automatic tone control sets equalizer levels with one touch for rock, country, pop, jazz, classical and news programs. With TheftLock, once the radio's code is set by the owner, the radio will not operate if it is removed from the vehicle.
- **ETR AM/FM stereo with compact disc player and six speakers** — optional on Silverado. This system features TheftLock, automatic tone control, CD random select and speed-compensated volume which automatically adjusts volume as speed increases to compensate for road noise.
- **ETR AM/FM stereo with compact disc player**, cassette player and six speakers — optional on Silverado. This system also features automatic tone control, speed-compensated volume, CD random select, TheftLock and bi-directional seek capability.

## Seats

- Available with vinyl, cloth, Custom Cloth or Custom Leather seating surfaces to suit the different needs of customers.
- **Adjustable head restraints** are standard on all outboard seats.
- **Custom Cloth bench seats** include a center armrest storage compartment with a coin holder, convenient writing surface and a map net mounted on the inside of the lid (standard on Silverado).
- **Custom Leather seating surfaces** are available on Silverado Regular-Cab, Extended-Cab and Crew-Cab models.

## Nobody Owns The Outdoors Like Chevy

It all began back in 1979 when Chevy Truck first became involved with outdoor organizations like B.A.S.S. (Bass Angler's Sportsmen Society). These hunting, fishing and sportsmen organizations helped prove the dependability of Chevy trucks, year after year. Today, nobody is more involved with the great outdoors than Chevy. Here are some of the affiliations:

- Official tow vehicle of B.A.S.S.
- Sponsor of the B.A.S.S. Masters Classic fishing tournament
- Official vehicle of Humminbird — a maker of sophisticated electronic fish finding equipment
- Official vehicle of Quail Unlimited — a group committed to maintaining quail habitats
- Official vehicle of Ranger Boats — manufacturer of premium bass fishing boats
- Future Farmers of America — teaches modern and successful farming techniques to tomorrow's leaders
- National Cutting Horse Association — dedicated to horses and the act of cutting (separating a cow, bull or calf from the herd for branding).

## Most Dependable, Longest-Lasting ... We Prove It!

What makes Chevy trucks last so long? Here are just a few reasons the '98 crop of Chevy trucks will be pulling stumps, hauling cargo or just racking up the miles for many years to come:

- The all-welded, ladder-type channel-design frame is cross-braced at strategic locations for exceptional strength and rigidity. For corrosion protection, the frame is dipped in hot wax.
- All exterior body panels except the roof are made of two-side-galvanized steel, providing excellent resistance to rust.
- The engine coolant used not only goes the distance (up to five years or 150,000 miles, whichever comes first), but does not contain silicates — an ingredient of conventional coolant that can eat away at water pump seals.
- Durable Vortec series engines feature high-strength steel camshafts and low-friction roller lifters for long-term durability.
- Tough diesel engines. You expect diesels to last, but with high-stress crankshaft bearings, one-piece rear crank seal (for reduced oil leakage) and oil spray nozzles for piston cooling, these engines should exceed typical diesel expectations.

\*Maintenance needs vary with different driving conditions.

## INTERIOR FEATURES (contd)

*Additional Features Available With Uplevel Seats Include (Depending On Seats Selected):*

- Wide center armrest — bench only — for driver and passenger convenience (Silverado)
- 6-way power seat is standard on Silverado Extended-Cab to tailor seating to individual tastes (not available in vinyl)
- Power driver- and passenger-seat lumbar adjustments are standard on Silverado models, not available in vinyl)
- Front seatback storage nets to secure small items like magazines and maps (Extended- and Crew-Cab only).

*Available Seating:*

*W/T And Cheyenne Regular-Cab*

- Standard bench seat (vinyl for Cheyenne and W/T, cloth optional)

*Cheyenne Extended-Cab*

- Standard 60/40 split-bench seat (vinyl)

*Silverado Regular-Cab and Crew-Cab*

- Standard bench seat with center stowage armrest (Custom Cloth or Custom Leather seating surfaces)

*Silverado Extended-Cab*

- Standard reclining 60/40 split-bench seat with center stowage armrest. Optional on Silverado Regular- and Crew-Cab (Custom Cloth or Custom Leather seating surfaces)

*Optional Reclining High-Back Bucket Seats*

- Optional on Silverado Extended-Cab and Crew-Cab only — with Custom Cloth or Custom Leather seating surfaces.

## Interior Colors

- Neutral
- Gray
- Blue
- Red.

## C/K PICKUP EXTERIOR FEATURES

- **Extensive corrosion protection** on C/K Pickup begins with the use of two-side-galvanized steel for all exterior body panels (except the roof). The galvanized-zinc coating prevents surface rust due to minor chips and scratches, and helps prevent holes that start from the inside. That's double protection. The frame receives added protection with a total submersion in wax. The inner and outer vehicle panels are coated by submersion in an electro-coat zinc primer before the application of primer surfacer and top coat.
- **Double-wall construction** helps prevent dents to the inside of the cargo box and tailgate from showing on the outside.

- **Two-tier loading** is made available by pockets in upper cargo box walls that create a second loading level above the wheelwells (Fleetside).
- **Welded cargo box** eliminates bolts that can damage cargo or cause rust.
- **Solar-Ray tinted glass** reduces interior heat buildup and helps protect interior fabrics and materials from damaging UV rays.

## Exterior Paint

- The basecoat/clearcoat paint used on C/K Pickup resists fading and provides a high-gloss shine for long-lasting exterior beauty. Clearcoat finish is used with all colors — solids and metallics.

## Exterior Colors

### New Paint Colors For '98:

- Indigo Blue Metallic
- Light Pewter Metallic
- Dark Copper Metallic.

### Other Colors:

- Emerald Green Metallic
- Onyx Black
- Summit White
- Victory Red
- Dark Carmine Red Metallic
- Medium Blue-Green Metallic
- Light Autumnwood Metallic (secondary color only — lower body on Two-Tone paint).

## DESIGN AND MANUFACTURING

C/K Pickup is manufactured at five General Motors assembly plants in these locations:

- Fort Wayne, Ind. (C/K1500, C/K2500, C/K3500)
- Oshawa, Ont., Canada (C/K1500, C2500)
- Pontiac, Mich. (C/K1500, C/K2500, C/K3500)
- Arlington, Texas (C/K 1500).
- Flint, Mich. (C/K3500 Crew-Cab).

## The Key to PassLock

Wouldn't it be nice if a truck had it's own guardian angel to keep it secure when the driver's not around? Well, for owners of '98 C/K Pickups, they get the next best thing — the security of the PassLock vehicle theft-deterrent system. PassLock protection is standard on all C/K Pickup models, but no similar system is available on any full-size pickup competitor.

With PassLock, if unauthorized ignition is attempted, the vehicle will not start and will remain disabled for about ten minutes. This can be accomplished because a sensor that is individually matched to your truck's ignition module is installed before it leaves the factory. This protects against the vehicle being hot-wired, while still eliminating the need for a special resistor-equipped ignition key.

So, while PassLock doesn't have wings like most guardian angels, we're pretty confident that it can fly in the face of crime.

## Think Bi-fuel When You Buy Fuel

New for '98, Chevrolet offers a full-size pickup which uses compressed natural gas (CNG) as fuel. Old news? Well, while Ford and Dodge also offer trucks which operate on CNG, only those produced by General Motors have the ability to use gasoline as well. This matters to the fleet operators who purchase these vehicles because they most likely have central refueling stations. Without bi-fuel capability, a truck can be limited in range — a crucial item if the vehicles are used for delivery. Some specifics of the CNG-capable Chevy:

- Available exclusively on C2500 Regular-Cab Long-Box model
- Equipped with bi-fuel Vortec 5700 V8
- Features the full 3-year/36,000 mile "Bumper to Bumper Plus" no-deductible warranty
- Vehicle automatically switches over from CNG to gasoline — no controls to activate
- Certified to California low emission vehicle (LEV) standards
- Features a 13-gallon carbon fiber-wrapped steel CNG tank and a 34-gallon gasoline tank
- Utilizes cleaner burning, domestically produced natural gas, which also costs less than gasoline.

## BODY STRUCTURE

- The frame of each C/K Pickup has an all-welded, ladder-type channel design with a boxed front-end section. The box section design adds strength where it is needed most — to support the engine, front suspension and transmission. The frame's deep C-channel rails are cross-braced for maximum strength and rigidity. Every frame is dipped in hot wax for corrosion protection.
- Precision-aligned door hinges are robotically welded to the door frames for a precise fit that will remain in position for many years to come.
- Ribbed body panels on the cab floor, back panels and cargo box floor add strength without increasing weight.
- Two front tow hooks are standard equipment on all four-wheel-drive models.

## ENGINES

With the choice of four Vortec engines and two diesel engines, Chevy C/K Pickup models offer one of the widest engine lineups in the industry.

### Vortec 4300 V6 SFI (L35)

The Vortec 4300 V6 SFI engine features power output comparable to a V8 engine, while maintaining the fuel economy of a V6. The Vortec 4300 V6 SFI engine is standard on all C/K1500 models. This refined V6 has impressive credentials and features:

- 200 horsepower at 4400 rpm
- 255 lb.-ft. of torque at 2800 rpm

- Gear-driven balance shaft for smooth engine performance
- High-swirl/fast-burn cylinder heads for complete combustion, resulting in more power, increased fuel economy and decreased emissions than other designs
- Tuned, two-piece intake manifold for excellent engine breathing, resulting in increased power over more restrictive manifolds
- Sequential Fuel Injection (SFI), which provides precise fuel delivery to each cylinder for maximum efficiency
- A special cam profile, which delivers plenty of low-speed torque for trailering, while extending and flattening the torque curve for impressive passing performance
- Roller lifters, which reduce internal engine friction by incorporating small rollers where they contact the camshaft. This results in enhanced engine durability
- Steel camshaft, designed to withstand the higher contact stresses associated with roller lifters.
- A cooling system, which features a controlled bypass thermostat that improves coolant flow balance, expedites engine warm-up, enhances heater performance and improves cooling by gradually directing coolant flow through the radiator when the engine reaches operating temperature
- Low maintenance due to platinum-tip spark plugs which can go up to 100,000 miles before the first scheduled tune-up\* and coolant that lasts up to five years or 150,000 miles.\*

\*Maintenance needs vary with different uses and driving conditions. See owner's manual for more information.

## ENGINES (contd)

### Vortec 5000 (L30) and 5700 V8 SFI Engines (L31)

The small block V8 Vortec 5000 (L30) and 5700 (L31) truck engines give C/K Pickup owners more of what they want: Loads of horsepower and torque and longer intervals between recommended service visits. The Vortec 5000 V8 is standard on C/K 2500 models and available on C/K1500 models. The Vortec 5700 V8 is optional on both C/K1500 and 2500 models. Here are the credentials of both engines:

#### Vortec 5000 Features:

- 230 horsepower at 4600 rpm
- 285 lb.-ft. of torque at 2800 rpm.

#### Vortec 5700 Features:

- 255 horsepower at 4600 rpm (250 horsepower at 4600 rpm on vehicles with GVWR of 10,000 lbs. or above)
- 330 lb.-ft. of torque at 2800 rpm
- Optional compressed natural gas (CNG) capability was added to the Vortec 5700 V8 for the 1997 model year (available on C2500 Regular-Cab Long-Box with specific equipment only). This allows fleet and municipality customers to upfit the Vortec 5700 V8 to use compressed natural gas which burns cleaner, producing fewer harmful emissions than gasoline.

#### Both Engines Feature:

- Cylinder heads with straight port design for maximum breathing ability. This cylinder head features a high compression ratio that improves thermal efficiency and performance, but does not increase the

engine's octane requirement. This means owners can continue to save money by using regular octane fuel

- Durable valvetrain design features a steel camshaft to better handle stress over the life of the engine. Roller lifters aid durability by reducing friction
- Low maintenance due to platinum-tip spark plugs which can go up to 100,000 miles before the first scheduled tune-up\*, and coolant that lasts up to five years or 150,000 miles\*(whichever comes first).

\*Maintenance needs vary with different uses and driving conditions. See owner's manual for more information.

### Vortec 7400 V8 SFI Engine (L29)

The Vortec 7400 (L29) big block V8 uses sophisticated technology to provide excellent horsepower and torque output and long intervals between recommended service visits. The Vortec 7400 V8 is optional on C/K2500 and 3500 models. This engine features:

- 290 horsepower at 4000 rpm
- 410 lb.-ft. of torque at 3200 rpm
- Sequential port fuel injection, which provides a highly efficient fuel-delivery method that aids cold starts and hot engine restart. By placing a separate fuel injector in the intake manifold for each cylinder, the fuel delivery is very precise. This results in high power output that does not sacrifice fuel economy.
- Cylinder heads with high-flow ports for maximum breathing ability. High-swirl, fast-burn combustion chambers and computer-designed pistons provide a 9.1:1 compression ratio (up from 7.9:1 in 1995).

## This One's For You, Herr Diesel!

With a host of improvements in the mid-'97 model year, the C/K 6.5-liter Turbo-Diesel engines show how advanced this engine design has come since Herr Doktor Rudolf Diesel himself first mixed kerosene's poor cousin with cast-iron way back in 1895. Here are some of the mid-'97 changes:

- Cooling system flow is increased to keep the engine cooler, increasing the engine's life. This is accomplished through dual thermostats, a new water crossover and an increased-flow water pump.
- Piston spray cooling was added, which uses jets to shower the bottom side of the pistons in oil. This not only increases lubrication, but also helps keep the pistons cooler, resulting in longer engine life.
- Larger-diameter oil cooler lines have been added to aid engine durability by keeping the oil cooler. Cooler oil is less susceptible to thermal breakdown, which can impair the oil's ability to properly lubricate.
- New ceramic rollers have been added to the fuel injection pump. These rollers are subjected to much friction during the distribution of fuel. The new material is designed last longer in this application than previous materials.

## Let's Go Racing!

It's an irresistible daydream ... putting on a flame-retardant Nomex suit and crash helmet ... strapping into a powerful vehicle ... taking up the pole position ... in a pickup truck?

Yes, pickup trucks go racing. In fact, the NASCAR Craftsman Truck Series is one of the hottest events in motorsports today, with 26 races scheduled for 1997. And, Chevy C/K Pickup is living up to its longest-lasting, most dependable\* image by cranking out the victories. For the inaugural season of the series in 1995, a Chevy truck placed first in the driver championship standings, and Chevy teams accounted for three of the top five places in point standings in the manufacturer championship standings. 1996 was an even better year, with Chevy trucks finishing the season first, second and third in total points.

And, if you need any more proof that the gold bowtie dominates the NASCAR scene, there's the Chevy Truck Challenge at the Disney racetrack in Orlando, Florida.

Many of these races are televised, so be sure to check them out.

When you tune in, you might even see a Chevy pace truck starting the race — just like the C/K Pickup that paced the 1996 Brickyard 400®.

\*Dependability based on longevity: 1986-1995 full-line light-duty truck company registrations. Excludes other GM divisions.

## ENGINES (contd)

This compression ratio improves thermal efficiency and performance, but does not increase the engine's octane requirement. This means owners can continue to save money by using regular octane fuel

- Two-piece aluminum intake manifold with long, tuned intake runners enhance low-speed torque for excellent launch characteristics. The plenum is designed to muffle induction noise
- Low maintenance due to platinum-tip spark plugs, which can go up to 100,000 miles before the first scheduled tune-up\* and coolant that lasts up to five years or 150,000 miles\*(whichever comes first).

\*Maintenance needs vary with different uses and driving conditions. See owner's manual for more information.

## 6.5 Liter Indirect EFI V8 Turbo-Diesel Engines (L56/L65)

Two versions of the 6.5 Liter Turbo-Diesel are available in C/K Pickup models. The L56 is optional on C/K2500 and 3500 models with GVWR below 8,600 lbs. and the L65 is optional on C/K2500 and 3500 models with GVWR at or above 8,600 lbs. Here are the credentials of the L56 and L65 engines:

### L56 6.5L V8 Turbo-Diesel (With GVWR Below 8,600 lbs.) Features:

- 180 horsepower output at 3400 rpm
- 360 lb.-ft. of torque at 1800 rpm.

### L65 6.5L V8 Turbo-Diesel (with GVWR At Or Above 8,600 lbs.) Features:

- 195 horsepower at 3400 rpm
- 430 lb.-ft. of torque at 1800 rpm (automatic transmission, 420 lb.-ft. of

torque at 1,800 rpm with manual transmission).

### Both Engines Feature:

- A completely integrated turbocharger system, with:
  - An electronically controlled Borg Warner/IHI turbocharger designed for quick response during acceleration
  - A wastegate on the exhaust side of the turbocharger to reduce boost pressure after maximum torque is obtained, thereby reducing stress on the internal engine components
  - 10 psi maximum boost at 1,800 rpm, delivering responsive acceleration on demand without noticeable turbo lag
- A design specifically engineered from the oil pan up to withstand the stress of turbocharging, for a long life of dependable service. Among these design features are a strengthened bulkhead area of the cylinder block and larger coolant passages and oil galleries to provide the increased flow needed for proper cooling and lubrication. Additionally, fatigue-resistant crankshaft bearing material and a leak-resistant one-piece rear-crankshaft seal are used
- A combustion chamber design, which ensures an even and complete burning of the fuel by optimizing the ratio of the air and fuel in the prechamber, combustion chamber and cylinder. This helps improve engine efficiency. A diesel catalytic converter reduces particulate and hydrocarbon emissions
- An indirect Electronic Fuel Injection system and an electronic throttle control design — the first application of this technology in the full-size pickup segment. Electronic control reduces the number of moving parts, which increases reliability. Benefits of the indirect Electronic Fuel Injection design include:
  - Increased fuel economy
  - Virtual elimination of white smoke

## ENGINES (contd)

during cold-starting and black smoke under hard acceleration

- Improved cold-starting
- Enhanced idle quality and lower noise
- Engine overheating protection
- A **fuel-management system**, which incorporates a double filtration filter, a water separator and a fuel heater in one canister. The fuel heater substantially reduces smoking during cold start-ups
- **Substantial improvement in fuel economy**, which can be realized over an equivalent gasoline engine, depending on use
- A **molded 9-blade composite fan**, designed to generate less noise and a more pleasing tone.

## ON-BOARD DIAGNOSTICS SECOND GENERATION (OBD II)

On-Board Diagnostics (standard on all engines) reached a new level of sophistication in the 1996 model year with the implementation of OBD II (On-Board Diagnostics Second Generation). A more powerful Powertrain Control Module now monitors all components affecting vehicle emissions to detect deterioration or malfunctions.

- The powerful PCM stores and retrieves diagnostic messages to help technicians diagnose and fix problems quickly and accurately.
- The PCM alerts the driver by illuminating the "Service Engine Soon" light when it detects a deterioration in the performance of any monitored system.
- Unlike the first-generation systems that signaled only system failures, OBD II alerts the driver to have the vehicle serviced before experiencing a possible breakdown or incurring more expensive repairs.

## TRANSMISSIONS

### 5-Speed Manual Transmission

A 5-speed manual transmission with Overdrive is standard on all C/K Pickup models. Three versions are available:

- **Light-duty (MG5)** — with Vortec 4300 V6 and 5000 V8 on C/K1500 models and C/K2500 models under 8,600 lbs. GVWR
- **Light-duty (M50)** — with Vortec 5700 V8 on C/K 2500 models under 8,600 lbs. GVWR
- Both light-duty transmissions feature good shift feel and short shift throws
- **Heavy-duty (MW3)** — New Venture Gear 4500 — used with all engines on C/K2500 and C/K3500 Regular-, Extended- and Crew-Cab models with GVWRs of 8,600 lbs. and above.

The New Venture Gear 4500 manual transmission features:

- Low transmission gear rattle
- Low transmission noise due to gear profile and torsional damper design
- Excellent shift feel due to shift gate design
- Single-piece counter shaft designed for durability and reliability
- Single-rail shifter with fewer components than prior four-rail design for greater dependability.

### 4L60-E 4-Speed Electronically Controlled Automatic Transmission

The 4L60-E 4-speed automatic transmission with Overdrive is optional on C/K1500 and C/K2500 models with a GVWR of less than 8,600 lbs. The 4L60-E's "intelligent" electronic controls allow the

## What Makes A Vortec A Vortec?

While the name "Vortec" is used a lot in advertising, it's not just a marketing moniker. The fact is, there is a definite criteria as to what makes an engine a Vortec. Here are the most important features of the pedigree:

- **Designed for maximum airflow** — Large, low-restriction air filters, optimum tuned intake runners and fast intake ports all help increase engine "breathing" for more power
- **Optimized combustion** — Precise fuel metering due to Sequential Fuel Injection and a combustion chamber designed to tumble and swirl the air/fuel mixture both result in more efficient combustion. This, in turn, results in fuel efficiency and low emissions
- **Low maintenance** — All Vortec engines use the proven technology of platinum-tip spark plugs (up to 100,000-mile service intervals), extended-life engine coolant (up to 5 year or 150,000-mile service intervals) and a single accessory drive belt (100,000-mile service interval).

## C/K Pickup vs. Ford F-Series

It's a tough world out there, and the full-size pickup truck market is no exception. The only way to survive is to be tougher still. Here are just a few of the ways in which C/K Pickup trucks pull away from the Ford F-Series:

- 4-wheel ABS: standard on C/K Pickup, optional on F-350
- Standard engine output (Regular Cab):

Model	HP	Torque
Chevy 1500	200	255
Ford F-150	205	255
Chevy 2500	230	285
Ford F-250	230	290
Chevy 3500	255	330
Ford F-350	210	325

- Interior room: C/K Pickup models provide more legroom and shoulder room than all F-Series models, whether Regular- or Extended-Cab
- Speed-sensitive steering: Electronic Variable Orifice (EVO) steering, which is speed-sensitive, is standard on C/K Pickup. Speed-sensitive steering is not available on F-Series.

\*250 horsepower at 4600 rpm on vehicles with GVWR of 10,000 lbs. or above.

## TRANSMISSIONS (contd)

transmission to match the engine's performance and deliver excellent fuel efficiency. Some features of the 4L60-E include:

- A new, two-piece case which adds increased powertrain stiffness, resulting in reduced vibration and noise
- A new, deeper transmission oil pan which provides better cooling than previous designs for longer transmission life
- A wide range of gear ratios, which enhances both performance and fuel economy. The 3.06:1 first-gear ratio provides high torque multiplication for initial acceleration. The Overdrive 0.70:1 fourth gear reduces engine rpm at cruising speed, thereby increasing fuel economy and reducing wear
- Precise and flexible electronic controls — the Powertrain Control Module (PCM) measures key vehicle input, including throttle position, vehicle speed, gear range, temperature and engine load. Shift points and shift smoothness are controlled by four solenoids that are connected to the PCM
- The new electronically controlled converter clutch, which now allows gradual engagement of the torque converter clutch for smooth driveability while aiding fuel economy
- New electronic line pressure scheduling software, which adjusts pressure to the clutches based on the torque output of the engine for a smooth, consistent shift feel
- Second-gear start feature, which provides an extra measure of control in slippery driving conditions. By moving the gear selector to the Drive 2 position, the driver can reduce torque to the drive wheels, increasing control during initial acceleration on slippery surfaces

- Long-Life automatic transmission fluid that won't need replacing for up to 100,000 miles under normal conditions (maintenance needs vary with different uses and driving conditions; see owner's manual for more information)
- A brake/transmission shift interlock, which is included with both optional automatic transmissions. The interlock requires the driver to apply the brake pedal to shift out of Park.

## 4L80-E 4-Speed Electronically Controlled Automatic Transmission

The heavy-duty 4L80-E electronically controlled 4-speed automatic transmission with Overdrive is optional on two-wheel-drive and four-wheel-drive C/K Pickup models of 8,600 lbs. GVWR and above, including Crew-Cab. The rugged 4L80-E has a maximum engine torque rating of 440 lb.-ft. It also is standard on models equipped with either the 6.5L L56 or L65 V8 Turbo-Diesel engines. Features of the 4L80-E include:

- A wide range of gear ratios, which enhances both performance and fuel economy. The 2.48:1 first-gear ratio provides high torque multiplication for initial acceleration. The Overdrive 0.75:1 fourth gear reduces engine rpm at cruising speed, thereby increasing fuel economy and reducing wear
- Precise and flexible electronic controls — the Powertrain Control Module (PCM) measures vehicle input, including throttle position, vehicle speed, gear range, temperature and engine load. The PCM acts as an interface between the engine and transmission to provide the feel of a virtually "seamless" powertrain. Shift

## TRANSMISSIONS (contd)

timing is controlled electronically by signals sent to the valve body's shift solenoids, which activate the shift valves and execute the gear changes

- New electronic line pressure scheduling software which adjusts pressure to the clutches based on the torque output of the engine for smoother, more consistent shift feel

- The new electronically controlled converter clutch which now allows gradual engagement of the torque converter clutch for smoother driveability, while aiding fuel economy
- Efficient transmission cooler lines which keep the transmission cooler, increasing longevity
- A contoured bottom pan, which helps assure ample oil supply
- A bottom pan drain plug, which makes the transmission easy to service. No longer does the entire pan have to be removed to drain the transmission fluid

- A 310mm torque converter, which is specially designed to enhance initial acceleration. The converter's lockup clutch improves fuel economy by reducing slippage at cruising speeds. A converter damper makes the application and release of the lockup feature less perceptible
- A brake/transmission shift interlock is included with automatic transmissions. The interlock requires the driver to apply the brake pedal to shift from Park.

## INSTA-TRAC 4-WHEEL DRIVE

The patented Insta-Trac system is standard on all four-wheel-drive C/K Pickup models. Insta-Trac makes it easy to shift into and out of four-wheel drive without leaving the cab.

- "On-the-fly" shifting from 2WD to 4WD High and back at any speed is possible with the Insta-Trac system (vehicle must be stopped to shift into 4-LO). The system also includes a 4WD Low gear for more demanding 4WD maneuvers, such as climbing steep grades or driving through deep snow or mud.
- An electronic shift transfer case also is available. This version of Insta-Trac has all the features mentioned above, but makes shifting from 2WD to 4WD High and back again as easy as pushing a button located on the instrument panel. The base Insta-Trac system uses a manual lever to switch in and out of four-wheel drive (available on K1500 and K2500 models below 8,600 lbs. GVWR).

- New four-wheel-drive front halfshafts are lighter in weight for better fuel economy and can now be removed without removing the hub/knuckle assembly, substantially improving service time. The new part is completely interchangeable with the previous halfshaft.

## C/K Pickup vs. Dodge Ram

C/K Pickup advantages stack up well against Dodge:

- 4-wheel ABS: standard on C/K Pickup, optional on Ram
- Standard engine output (Regular-Cab):

Model	HP	Torque
Chevy 1500	200	255
Ram 1500	175	230
Chevy 2500	230	285
Ram 2500	230	330

Chevy 3500	255	330
Ram 3500	230	330

- Speed-sensitive steering: EVO steering is standard on C/K Pickup — speed-sensitive steering is not available on Ram
- Legroom: C/K Pickup models provide more front (Regular and Extended-Cab: 41.7 inches vs. 41.0 inches) and rear (Extended-Cab: 34.8 inches vs. 31.6 inches) legroom than Ram.

## The Third Door?

C/K Pickup was the first on the market with the useful third door. It still makes a lot of sense for many different applications. Not only does it make getting passengers or cargo in and out easier, but provides drivers with disabilities the opportunity to place mobility aids, such as wheel-chair lifts, in the back of the cab.

## GM Mobility Program

Chevrolet recognizes the importance of mobility to everyone's life and, therefore, offers financial assistance to persons with disabilities through the General Motors Mobility Program. This program provides financial assistance — up to \$1,000 — toward the cost of any after-market adaptive equipment for drivers or passengers. A special feature of the program is single-transaction GMAC financing for the vehicle and its adaptive aids. Further details are available by calling the GM Mobility Assistance Center at 1-800-323-9935. The hearing impaired can call the Customer Assistance Center at 1-800-TDD-CHEV.

## Steering You In The Right Direction

All Chevy C/K Pickup trucks come standard with Electronic Variable Orifice (EVO) steering. EVO steering changes the amount of power steering assist based on how fast the vehicle is traveling. As you have probably noticed, it takes more muscle to move the steering wheel when you're parking than when you are on the highway. The EVO system automatically boosts power steering assist when you need it, but reduces the assist when you're cruising at higher speeds, for better road feel.

## SUSPENSION

### Front

- An independent Short/Long Arm (SLA) Suspension with a stabilizer bar equips the front of every C/K Pickup. Chevy C/K Pickup has used their basic current SLA Suspension since 1988 — many years ahead of Ford. SLA Suspension helps the front wheels step over bumps for a stable ride and enhanced control, while it keeps the tires more flatly in contact with the road for less tire wear and better traction.
- Two-wheel-drive models have computer-selected, friction-free coil springs for squeak-free operation.
- Four-wheel-drive models are equipped with torsion bars which allow more room for the driveline components going to the front wheels. The torsion bars are computer-selected to optimize ride and handling. The front differential is mounted to the front frame with rubber bushings on four-wheel-drive models to isolate driveline noise and vibration. The C/K Pickup platform minimizes the protrusion of the transmission, transfer case and driveshafts below the body for additional protection when traveling over uneven terrain.

### Rear

- A rigid rear axle and variable-rate, two-stage, multi-leaf springs comprise the rear suspension. The longer set of leaves provides a smooth ride when the vehicle is lightly loaded with cargo. As additional passengers and cargo are added, the longer leaves flatten out, and shorter, stiffer leaves deliver additional support without sacrificing a comfortable ride.

## STEERING

- Electronic Variable Orifice (EVO) power steering is standard on all C/K Pickup models. EVO is an electronically controlled power steering system that improves steering ease at lower vehicle speeds (e.g., parking). At higher vehicle speeds, steering effort reverts to normal levels. EVO also is designed to provide a lower power steering fluid operating temperature, which may help extend fluid life.

## BRAKES

- Four-wheel anti-lock brake system (ABS) is standard on all C/K models to help maintain steering control and minimize wheel lockup on most slippery surfaces.
- Power front disc/rear drum brakes are featured on C/K Pickup braking systems. The large, ventilated front rotors improve brake cooling. Audible pad-wear sensors are designed to alert the driver when brake pad maintenance is needed.

## WHEELS

- Standard 15" or 16" steel wheel, silver with black hub ornament (2WD wheel shown).

- Optional 15" or 16" Rally Wheel trim (standard on Silverado); (4WD wheel shown).

- Standard 16" front wheel for 3500 Series Silverado when equipped with dual rear wheels.\*

- Optional 15" cast-aluminum wheel (C1500 only).

- Optional 16" cast-aluminum wheel (K1500 only).

- Optional 15" chrome-plated steel wheel with chrome hub ornament (C1500 only).

\*Standard trim has black center.

## TIRES

- New for 1998, the standard tires on C1500 models provide reduced rolling resistance.

C/K Pickup offers the following tires as standard equipment:

- P235/75R-15 all-season steel-belted radial blackwall tires (C1500)
- P245/75R-16 all-terrain steel-belted radial blackwall tires (K1500)
- LT225/75R-16D all-season steel-belted radial blackwall tires (C2500)
- LT245/75R-16D all-season steel-belted radial blackwall tires (K2500)
- LT225/75R-16E all-season steel-belted radial blackwall tires (C3500 and K3500)

## Demographics

- Age target is mid-30s to mid-40s
- 22-24% of buyers are college graduates
- Median household income of \$55,000-\$60,000
- Predominately male purchasers.

Buyers who select C/K Pickup are looking for a trusted, dependable partner that provides comfort and styling appearances, as well as tough, rugged capabilities. Buyers tend to enjoy active outdoor lifestyles.

## C/K Pickup

### History

#### (By Model Year)

- 1918 — First Chevy Truck
- 1924 — First pickup bodies
- 1936 — All-steel body introduced; hydraulic brakes standard
- 1941 — New sheet metal
- 1958 — 4x4 debuts on 1/2-, 3/4- and 1-ton pickups
- 1974 — Full-time four-wheel drive with V8 engine is released
- 1975 — Extended-Cab model debuts
- 1982 — 6.2 Liter diesel engine released
- 1987 — TBI fuel injection on V6 and V8 gas engines
- 1988 — All-new interior and exterior design introduced
- 1992 — Suburban, Blazer and Crew-Cab join C/K platform; 6.5 Liter Turbo-Diesel V8 introduced
- 1993 — 4L60-E electronic 4-speed automatic introduced
- 1994 — Two new 6.5 Liter diesel engines introduced
- 1995 — Driver air bag for vehicles under 8,600 lbs. GVWR; four-wheel ABS introduced; redesigned interior
- 1996 — Daytime Running Lamps; new Vortec Series engines; third door for Extended-Cab
- 1997 — Outboard front-passenger air bag on vehicles under 8,600 lbs. GVWR; EVO power steering added.

### GENUINE CUSTOMER CARE

Chevrolet owners are covered by Genuine Customer Care, a comprehensive owner protection plan that includes the following:

#### Bumper to Bumper Warranty

The GM 3-year/36,000-mile, no-deductible, limited Bumper to Bumper warranty covers repairs for all Chevrolet cars, including labor and parts, to correct any defects in material or workmanship occurring during the warranty period. Warranty features include air conditioning repair, tires, towing, no-cost warranty transfer and 6-year/100,000-mile (whichever comes first) sheet-metal rust-through protection. There also is emissions control system coverage, which varies by geographic location. The only item not covered by the warranty is normal maintenance.

#### Courtesy Transportation

Customers who purchase or lease a Chevrolet car or truck will be able to take advantage of Courtesy Transportation at no additional charge when their vehicles are left at a participating dealership for repairs covered under the 3-year/36,000-mile New Vehicle Limited Warranty. Courtesy Transportation, at participating dealers only, may include shuttle service, expense reimbursement, or, if the repairs require leaving your vehicle overnight, a vehicle rental. See your dealer for details.

#### 24-Hour Roadside Assistance

Customers who purchase or lease a Chevrolet also receive the peace of mind that if something should go wrong on the road, help is just a phone call away, 365 days a year, with Chevrolet 24-Hour Roadside Assistance. There are two levels of service:

Roadside Basic Care covers you as long as you own your C/K Pickup and provides:

- Free towing for warranty repairs (to closest dealer)

- Over-the-phone basic technical advice
- Available dealer services at reasonable costs (i.e., wrecker services, locksmith/key service, glass repair, etc.).

Roadside Courtesy Care is available for a period of three years or 36,000 miles (whichever comes first). It provides all of the features of Roadside Basic Care, plus:

- Free towing (to closest dealer)
- Free locksmith/key service (when keys are lost or locked inside)
- Free flat tire service and jump start
- Free fuel delivery on the road.

## L35

---

### Features and Benefits

**Sequential central port injection (SCPI)** - GM's 4300 L35 offers the GM-patented sequential central port fuel injection. SCPI, which provides high-precision fuel control for optimal cylinder-to-cylinder distribution, uses one injector per cylinder to deliver fuel to the inlet ports through flexible fuel transport tubes. Each duty-cycled single-disk injector delivers the precise amount of fuel to a poppet (fuel atomization) nozzle at each cylinder for its combustion cycle. For further refinement, a compound angle was added to the poppet nozzle to eliminate misfire. SCPI is a highly efficient fuel-delivery method that improves cold start and hot engine restart, and takes fuel control at idle to "world class." SCPI is also a major catalyst for increased horsepower and helps engines meet today's more stringent fuel-economy requirements. To summarize, SCPI – precise, high-pressure fuel delivery – helps these truck engines achieve their maximum power and torque in an efficient manner that does not sacrifice fuel economy.

**Mass air flow meter** - Thanks to mass air flow metering, engineers have taken the guesswork out of air flow measurement. This more precise air flow metering system accurately measures air flow, helping to eliminate the variability in a number of conditions, including changes in altitude and temperature. It also provides improved smoothness for 0 - 60 mph and 50 - 80 mph accelerations.

**Crankshaft position sensor** - The crankshaft position sensor is a major breakthrough in diagnostic technology that allows the vehicle control module (VCM) to know the exact relative position in time of each cylinder with respect to its combustion event. This aids in the detection of misfire and helps to ensure that the engine is performing at its optimum efficiency.

**Long life systems** - The L35 engine offers owners a long life ignition system that is virtually maintenance-free for 100,000 miles. This system includes platinum-tipped spark plugs, low resistance spark plug wires that increase conductivity, a composite distributor housing and stem, and a high voltage switch that requires no timing adjustment. Other heavy-duty systems that will help keep your truck trouble-free over the long haul include long life engine coolant, a Magnaquench starter (S/T and P platforms only), a single 100,000-mile accessory belt, damperless springs and lip stem seals (valvetrain) and a robust water pump and seals.

**Exhaust manifold** - The exhaust manifold for V6 and V8 truck engines provides higher engine performance capabilities, and improves tailpipe emissions. The Exhaust Gas Recirculation (EGR) take-off point was established so that an evenly distributed take-off EGR can be made to enhance cylinder-to-cylinder operations. This will improve the engine's driveability and emissions capability. The exhaust manifold material has changed from a nodular cast iron to high silicon moly (molybdenum) material. This high temperature alloy improves the durability of the manifold even under the enhanced performance levels of the engine, and allows the manifold to remain stable and distortion free throughout its life. The exhaust manifold features a three-bolt flange to reduce leakage. All of these features result in an enhanced exhaust system that offers maximum air flow through the engine.

**On-Board Diagnostics Second Generation (OBDII)** - As with all GM vehicles, the L35 is fully OBDII compliant. The VCM, a highly sophisticated on-board computer and one of the industry's most powerful, monitors a wide variety of emissions systems and components for the slightest level of deterioration or malfunction. This includes the fuel delivery system, catalytic converter and EGR valve. Its diagnostic

tools include the oxygen sensor, crank and cam position sensors, MAP sensor and manifold air temperature sensor. In addition to helping vehicles meet the more stringent emissions standards and improving overall system reliability, OBDII capability has some additional benefits for the customer, as well. The VCM stores and retrieves diagnostic messages to help technicians diagnose and fix problems more quickly and accurately. And since OBDII sets trouble codes (SERVICE ENGINE SOON light), when a system begins to deteriorate rather than waiting for a complete system failure, owners can bring their vehicles in for service before experiencing a possible breakdown or more costly repair.

**Noise reduction** - Noise reduction is a major goal of the truck engine program and has been achieved through enhancing stiffness in three major areas - the accessory drive, engine block and engine/transmission interface. The accessory drive features a stiffer mounting scheme and a single serpentine drive system across all platforms. This reduces driveline noise and facilitates engine maintenance and vehicle packaging. The engine block itself has been redesigned for additional stiffness, while at the same time adds no additional mass. Three heavy-duty bolts now attach the transmission bell housing to the oil pan to increase powertrain bending stiffness and reduce noise. When used in combination with the 4L60-E transmission, which uses a two-piece case, this powertrain package is second to none in overall bending stiffness. The L35 also offers a counter-rotating balance shaft that cancels the primary vibration and results in a smooth running, quiet engine. Add a cast aluminum oil pan, composite front cover, remote composite air cleaner and tangentially mounted compressor, and you're ready for a virtually noise- and vibration-free ride.

**Cylinder head** - The L35 maximizes air flow into the cylinder head through the use of a straight-port design. This more powerful combustion chamber increases the compression ratio to 9.2:1, which improves thermal efficiency, performance and fuel economy without increasing octane requirements. By using a straight-port configuration, engineers were able to increase both the air flow through the intake ports and the tumble/swirl ratio in the combustion chamber. In engines, air flow equals performance and fuel economy.

**Valvetrain** - The V6 valvetrain continues to offer some significant features that enhance durability. The camshaft is made of steel to better handle stress over the life of the engine. The L35 also offers roller lifters. This helps to reduce friction and improves wear resistance over time. Roller lifters also help to increase low-end torque while at the same time extend the engine's dynamic operating range. Engineers reduced the duration profiles to provide improved low-speed torque without sacrificing power. Improved low-end torque provides the power for towing or trailering, while extending and flattening the torque curve generates the passing performance. Utilizing low friction roller lifters helps to eliminate internal power loss and maximize fuel economy.

**Cable over cam throttle control** - By using a cable over cam throttle control design, engineers are able to reduce excessive tire spin that sometimes occurs when accelerating from complete stops. This is of particular concern in lighter trucks. Two unique designs have been developed - one for use in the S/T and M/L platforms, the other in the C/K, G, P platforms.

**Cooling system** - The L35 cooling system features a controlled by-pass thermostat that enhances overall system performance. It improves bank-to-bank coolant flow balance, expedites warm-up and overall heater performance, and allows air flow through the radiator once the engine is warm, improving cooling. This bearing design improves the water pump bearing life. Radiator nipples, hoses and clamps have become standardized across all truck engines.

**Intake manifold** - The air intake manifold of the L35 is easy to detect because of its use of distinctive colors and materials. The black and silver manifold is comprised of two parts - a lower aluminum and upper composite piece that is specially designed to reduce both mass and noise. It also acts as a thermal insulator and helps in tuning for best air flow.

**L35 evolution** - With all the enhancements, one would think that there were some sacrifices made on the L35. Wrong! Engineers used a "no trade-offs" approach to upgrading this engine. The L35 offers the same or better fuel economy and performance as its predecessor, while maintaining engine mass, reducing noise and offering QRD features that will keep it virtually maintenance free for 100,000 miles.

**Linear EGR valve** - The linear exhaust gas recirculation (EGR) valve is another GM-pioneered design that provides accurate EGR control for improved fuel economy and emissions. The computerized engine control module precisely positions the valve, regardless of manifold pressure and engine load, for exact introduction of EGR throughout the entire engine operating range.

**RPM pistons** - The L35 continues to utilize Revised Permanent Mold (RPM) pistons. RPM pistons, engineered using highly sophisticated GM computer programs, are significantly more durable and quieter, and aid in fuel efficiency.

**Leadership** - The 4300 V6 is among the best six-cylinder engines on the road today. It has strong torque, high specific power and smooth operation. These characteristics make it a perfect fit for sport/utility and commercial applications where performance, reliability and durability are required. The 4300 L35 high-performance engine is a leader in power delivery and fuel economy, and is an outstanding value for customers interested in a performance powerplant. In fact, customers have told us that they consider the 4300 L35 to be on the leading edge of performance and clearly ahead of the pack in fuel economy.

### Features and Benefits

**Sequential central port injection (SCPI)** - GM's Vortec 5000 L30 offers the GM-patented sequential central port fuel injection. SCPI, which provides high-precision fuel control for optimal cylinder-to-cylinder distribution, uses one injector per cylinder to deliver fuel to the inlet ports through flexible fuel transport tubes. Each duty-cycled single-disk injector delivers the precise amount of fuel to a poppet (fuel atomization) nozzle at each cylinder its combustion cycle. For further refinement, a compound angle was added to the poppet nozzle for improved durability. SCPI is a highly efficient fuel-delivery method that improves cold start and hot engine restart, and takes fuel control at idle to "world class." SCPI is also a major catalyst for increased horsepower and helps engines meet today's more stringent fuel-economy requirements. To summarize, SCPI – precise, high-pressure fuel delivery – helps these truck engines achieve their maximum power and torque in an efficient manner that does not sacrifice fuel economy.

**Mass air flow meter** - Thanks to mass air flow metering, engineers have taken the guesswork out of air flow measurement. This more precise air flow metering system accurately measures air flow, helping to eliminate the variability in a number of conditions, including changes in altitude and temperature. It also provides improved smoothness for 0 - 60 mph and 50 - 80 mph accelerations.

**Crankshaft position sensor** - The crankshaft position sensor allows the vehicle control module (VCM) to know the exact relative position in time of each cylinder with respect to its combustion event. This aids in the detection of misfire and helps to ensure that the engine is performing at its optimum efficiency.

**Long life systems** - The L30 engine offers owners a long life ignition system that is virtually maintenance-free for 100,000 miles. This system includes platinum-tipped spark plugs with a 100,000-mile life expectancy, low resistance spark plug wires that increase conductivity, a composite distributor housing and stem, and a high voltage switch that requires no timing adjustment. Other heavy-duty systems that will help keep your truck trouble-free over the long haul include long life engine coolant, a single 100,000-mile accessory belt, damperless springs and lip stem seals (valvetrain) and a robust water pump and seals.

**The quest for "maintenance-free"** - At-home mechanics and do-it-yourselfers will have less to tinker with on GM's truck engines, thanks to enhanced service intervals that require less maintenance. For example, the cooling system interval for light- and heavy-duty applications goes from 30,000 miles or two years to 100,000 miles or five years. Spark plug and spark plug wire service is extended to 100,000 miles, and engine timing checks are no longer required. These examples are for highway driving and will be included in owners'/service manuals, as will the maintenance schedule for short trip/city driving.

**Exhaust manifold** - The exhaust manifold for V6 and V8 truck engines provides higher engine performance capabilities, and improves tailpipe emissions. The Exhaust Gas Recirculation (EGR) take-off point was established so that an evenly distributed take-off of EGR can be made to enhance cylinder-to-cylinder operations. This improves the engine's driveability and emissions capability. The exhaust

manifold material has changed from a nodular cast iron to a high silicon moly (molybdenum) material. This high temperature alloy improves the durability of the manifold even under the enhanced performance levels of the engine, and allows the manifold to remain stable and distortion free throughout its life. The exhaust manifold features three-bolt flange to reduce leakage. The L30 also features increased muffler volume. All of these features result in an enhanced exhaust system that offers maximum air flow through the engine.

**On-Board Diagnostics Second Generation (OBDII)** - As with all GM vehicles, the L30 became fully OBDII compliant in 1996. This required significant enhancements to the vehicle control module (VCM). The VCM, a highly sophisticated on-board computer and one of the industry's most powerful, now monitors a wide variety of emissions systems and components for the slightest level of deterioration or malfunction. This includes the fuel delivery system, catalytic converter and EGR valve. Its diagnostic tools include the oxygen sensor, crank and cam position sensors, MAP sensor and manifold air temperature sensor. In addition to helping vehicles meet the more stringent emissions standards and improving overall system reliability, OBDII has some real benefits for the customer. The VCM stores and retrieves diagnostic messages to help technicians diagnose and fix problems more quickly and accurately. And since OBDII sets trouble codes (SERVICE ENGINE SOON light), when a system begins to deteriorate rather than waiting for a complete system failure, drivers can bring their vehicles in for service before experiencing a possible breakdown or more costly repair.

**Improved emissions** - The 1998 L30 meets stricter evaporative emission regulations for all 50 states

**Noise reduction** - Noise reduction has been achieved in a number of ways. The accessory drive features a stiffer mounting scheme and a single serpentine drive system across all platforms. Add a composite front cover, remote composite air cleaner and tangentially mounted compressor, and you're ready for a virtually noise- and vibration-free ride.

**Cylinder head** - Air flow has been increased into the cylinder head of the L30 through the use of a straight-port design. This more powerful combustion chamber increases the compression ratio to 9.2:1, which improves thermal efficiency, performance and fuel economy without increasing octane requirements. Revised pistons also help to increase the compression ratio.

**Valvetrain** - The L30 has a steel camshaft to better handle stress over the life of the engine. The L30 also has roller lifters. This helps to reduce friction and improves wear resistance over time. Roller lifters also help to increase low-end torque while at the same time extend the dynamic operating range. Low-end torque provides the power for towing or trailering, while extending and flattening the torque curve generates the passing performance. The use of low friction roller lifters helps to eliminate internal power loss and maximize fuel economy.

**Cooling system** - This system features a controlled by-pass thermostat that enhances overall system performance. It improves bank-to-bank coolant flow balance, expedites warm-up and overall heater performance, and allows air flow through the radiator once the engine is warm, improving cooling. This bearing design improves the water pump bearing life. Radiator nipples, hoses and clamps have become standardized across all truck engines.

**Intake manifold** - The air intake manifold of the L30 is easy to detect because of its use of distinctive colors and materials. The black and silver manifold is comprised of two parts - a lower aluminum and upper composite piece that is specially designed to reduce both mass and noise. It also acts as a thermal insulator and helps in tuning for best air flow.

**Linear EGR valve** - The linear exhaust gas recirculation (EGR) valve is another GM-pioneered design that provides accurate EGR control for improved fuel economy and emissions. The computerized

engine control module precisely positions the valve, regardless of manifold pressure and engine load, for exact introduction of EGR throughout the entire engine operating range.

**Camshaft profile** - These profiles are designed to take advantage of the higher stress carrying capabilities of the steel roller cam. This provides excellent low speed torque, generates good dynamic range and results in improved specific output.

**Cam over throttle control** - The aluminum throttle body for the V8 engines utilizes a linear cam profile, a throttle blade wedge and bore shaping. Fine tuning these parameters provides the V8 vehicle applications with good launchability and response linearity during accelerations. This, in turn, results in good overall throttle progression. The cam selection also played an important role in obtaining the proper accelerator pedal effort.

**Fuel Economy Estimates** - The 5000 L30 is projected to better the fuel economy of its predecessor, the LO3, by up to 10 percent.

## L31

---

### Features and Benefits

**Sequential central port injection (SCPI)** - GM's Vortec 5700 L31 now offers the GM-patented sequential central port fuel injection. SCPI, which provides high-precision fuel control for optimal cylinder-to-cylinder distribution, uses one injector per cylinder to deliver fuel to the inlet ports through flexible fuel transport tubes. Each duty-cycled single-disk injector delivers the precise amount of fuel to a poppet (fuel atomization) nozzle at each cylinder for its combustion cycle. For further refinement, a compound angle was added to the poppet nozzle for improved durability. SCPI is a highly efficient fuel-delivery method that improves cold start and hot engine restart, and takes fuel control at idle to "world class." SCPI is also a major catalyst for increased horsepower and helps engines meet today's more stringent fuel-economy requirements. To summarize, SCPI – precise, high-pressure fuel delivery – helps these truck engines achieve their maximum power and torque in an efficient manner that does not sacrifice fuel economy.

**Mass air flow meter** - Thanks to mass air flow metering, engineers have taken the guesswork out of air flow measurement. This more precise air flow metering system accurately measures air flow, helping to eliminate the variability in a number of conditions, including changes in altitude and temperature. It also provides improved smoothness for 0 - 60 mph and 50 - 80 mph accelerations.

**Crankshaft position sensor** - The crankshaft position sensor allows the vehicle control module (VCM) to know the exact relative position in time of each cylinder with respect to its combustion event. This aids in the detection of misfire and helps to ensure that the engine is performing at its optimum efficiency.

**Long life systems** - The L31 engine offers owners a long life ignition system that is virtually maintenance-free for 100,000 miles. This system includes platinum-tipped spark plugs with a 100,000-mile life expectancy, low resistance spark plug wires that increase conductivity, a composite distributor housing and stem, and a high voltage switch that requires no timing adjustment. Other heavy-duty systems that will help keep your truck trouble-free over the long haul include long life engine coolant, a Magnaquench starter, a single 100,000-mile accessory belt, damperless springs and lip stem seals (valvetrain) and a robust water pump and seals.

**The quest for "maintenance-free"** - At-home mechanics and do-it-yourselfers will have less to tinker with on GM's truck engines, thanks to enhanced service intervals that require less maintenance. For example, the cooling system interval for light- and heavy-duty applications goes from 30,000 miles or two years to 100,000 miles or five years. Spark plug and spark plug wire service is extended to 100,000 miles, and engine timing checks are no longer required. These examples are for highway driving and will be included in owners'/service manuals, as will the maintenance schedule for short trip/city driving.

**Exhaust manifold** - The exhaust manifold for V6 and V8 truck engines provides higher engine performance capabilities, and improves tailpipe emissions. The Exhaust Gas Recirculation (EGR) take-off point was established so that an evenly distributed take-off of EGR can be made to enhance cylinder-to-cylinder operations. This improves the engine's driveability and emissions capability. The exhaust manifold material has changed from a nodular cast iron to a high silicon moly (molybdenum) material.

This high temperature alloy improves the durability of the manifold even under the enhanced performance levels of the engine, and allows the manifold to remain stable and distortion free throughout its life. The exhaust manifold features a three-bolt flange to reduce leakage, and the entire exhaust system will be built of aluminized stainless steel. On the L31 certified for heavy-duty emissions, the dual exhaust system includes three-inch takedown pipes and a rearward catalyst. A forward catalyst and 1-7/8 inch takedown pipes are found on the light-duty version. Both the light-and heavy-duty versions feature increased muffler volume. All of these features result in an enhanced exhaust system that offers maximum air flow through the engine.

**On-Board Diagnostics Second Generation (OBDII)** - As with all GM vehicles, the L31 became fully OBDII compliant in 1996. This required significant enhancements to the vehicle control module (VCM). The VCM, a highly sophisticated on-board computer and one of the industry's most powerful, now monitors a wide variety of emissions systems and components for the slightest level of deterioration or malfunction. This includes the fuel delivery system, catalytic converter and EGR valve. Its diagnostic tools include the oxygen sensor, crank and cam position sensors, MAP sensor and manifold air temperature sensor. In addition to helping vehicles meet the more stringent emissions standards and improving overall system reliability, OBDII has some real benefits for the customer. The VCM stores and retrieves diagnostic messages to help technicians diagnose and fix problems more quickly and accurately. And since OBDII sets trouble codes (SERVICE ENGINE SOON light), when a system begins to deteriorate rather than waiting for a complete system failure, drivers can bring their vehicles in for service before experiencing a possible breakdown or more costly repair.

**Improved emissions** - The 1998 L31 meets stricter evaporative emission regulations for all 50 states.

**Noise reduction** - Noise reduction has been achieved in a number of ways. The accessory drive features a stiffer mounting scheme and a single serpentine drive system across all platforms. Add a composite front cover, remote composite air cleaner and tangentially mounted compressor, and you're ready for a virtually noise- and vibration-free ride.

**Cylinder head** - Air flow has been increased into the cylinder head of the L31 through the use of a straight-port design. This more powerful combustion chamber increases the compression ratio to 9.4:1, which improves thermal efficiency, performance and fuel economy without increasing octane requirements.

**Valvetrain** - The L31 has a steel camshaft to better handle stress over the life of the engine. The L31 also has roller lifters. This helps to reduce friction and improves wear resistance over time. Roller lifters also help to increase low-end torque while at the same time extend the dynamic operating range. Low-end torque provides the power for towing or trailering, while extending and flattening the torque curve generates the passing performance. The use of low friction roller lifters helps to eliminate internal power loss and maximize fuel economy.

**Cooling system** - This system features a controlled by-pass thermostat that enhances overall system performance. It improves bank-to-bank coolant flow balance, expedites warm-up and overall heater performance, and allows air flow through the radiator once the engine is warm, improving cooling. This bearing design improves the water pump bearing life. Radiator nipples, hoses and clamps have become standardized across all truck engines.

**Intake manifold** - The air intake manifold of the L31 is easy to detect because of its use of distinctive colors and materials. The black and silver manifold is comprised of two parts - a lower aluminum and upper composite piece that is specially designed to reduce both mass and noise. It also acts as a thermal insulator and helps in tuning for best air flow.

**Linear EGR valve** - The linear exhaust gas recirculation (EGR) valve is another GM-pioneered design that provides accurate EGR control for improved fuel economy and emissions. The computerized engine control module precisely positions the valve, regardless of manifold pressure and engine load, for exact introduction of EGR throughout the entire engine operating range.

**Camshaft profile** - These profiles are designed to take advantage of the higher stress carrying capabilities of the steel roller cam. This provides excellent low speed torque, generates good dynamic range and results in improved specific output.

**Cam over throttle control** - The aluminum throttle body for the V8 engines utilizes a linear cam profile, a throttle blade wedge and bore shaping. Fine tuning these parameters provides the V8 vehicle applications with good launchability and response linearity during accelerations. This, in turn, results in good overall throttle progression. The cam selection also played an important role in obtaining the proper accelerator pedal effort.

**RPM pistons** - The L31 truck engine features state-of-the-art RPM pistons. This represents an expanded application for this product, first introduced in 1994 on the 4300 Vortec V6. The RPM piston, engineered using highly sophisticated GM computer programs, is more durable and quieter, and aids in overall fuel efficiency. The L31 has one size piston for all bores for ease in manufacturing.

**Fuel economy estimates** - The 5.7L L31 is projected to better the fuel economy of its predecessor, the LO5, by up to 10 percent.

# 6.5L V8 Turbo Diesel

## L65/ L56

*"The turbo diesel is a welcome addition particularly for those who put lots of miles on their van. As many have come to know, diesel engines are more economical to operate over the long run and they generally have loads of grunt (6.5L boasts 385 ft/lbs of torque at a low 1700 rpm)."*

# 6.5L V8

## Diesel

### L56/L65

---

#### Features and Benefits

**Electronic fuel injection control system** - Both the normal (L56) and heavy-duty emissions certified (L65) versions of GM's turbo diesel engine utilize an electronic fuel-injection control system. This major technological enhancement incorporates a powertrain control module (PCM) that controls both the engine and transmission, an electronic throttle control and an electronically controlled fuel-injection pump. The adaptation of electronics to the rotary injection pump yields almost complete freedom to schedule fuel quantity and timing at optimal values for every speed and load point. What does all of this mean to the customer? Increased fuel economy, the elimination of black and white exhaust, improved cold weather starting, enhanced idle quality and reduced noise levels. The electronic fuel delivery system also helps protect the engine from overheating and other abuses, and allows GM to be fully compliant with current emissions standards. GM was the first manufacturer to introduce an electronically controlled fuel injection system in diesel pickup trucks.

The fuel injection pump was upgraded in 1997 for improved durability by changing the Optical Sensor Tracking Encoder (OSTE) circuit board. In addition, the steel rollers in the pump were replaced with ceramic rollers for longer life. This system also makes available three electronically controlled Power Take Off (PTO) speeds. They are 1070 RPM, 1360 RPM, and 1600 RPM. These speeds can be activated by a simple switch.

**Turbocharging** - When GM set out to design the 6.5L V8 diesel engine, the goal was to build an engine that was reliable and durable, with unparalleled performance. From the start, the 6.5L was designed specifically for turbocharging. The secret weapon behind the 6.5L turbo diesel is the GM computer controlled wastegate. This wastegate allows the turbocharger rotor speed and boost to be electronically adjusted as altitude and engine speed change, and as torque is needed. The wastegate helps the engine work harder, but only when it needs help. When you need torque, it's there; when it's not required, the wastegate does not overwork the engine. The payoff is impressive fuel mileage, smooth, quiet operation and the necessary power to complete the job. This uniquely designed wastegate turbocharger delivers quick throttle response during acceleration and reduces turbo-boost pressure after obtaining maximum torque. The wastegate is designed to prolong turbo life and help manage the overall stress on internal engine components.

**On-Board Diagnostics Second Generation (OBDII)** - As with all GM vehicles, GM's L56 and L65 turbo diesel engine are fully OBDII compliant. This required significant enhancements to the powertrain control module (PCM). The PCM, a highly sophisticated on-board computer, received a 50-percent increase in memory and improved diagnostic capabilities in 1996. The PCM, which began controlling the fuel-lift pump and air conditioner in 1996, also monitors sensor systems such as coolant temperature, fuel temperature, air temperature, barometer, exhaust gas recirculation (EGR) pressure, turbo boost pressure and the thermostat diagnostic. This technology will help GM vehicles meet the new, more stringent emissions regulations, as well as improve idle stability. Misfire detection has been added to OBDII for 1998.

**L65 gets a new look in a new van** - For 1996, the 6.5L turbo diesel engine was introduced in GM's newly designed, full-size van (GMT 600). For this application, engineers developed a center-mounted turbocharging system that shortens the air and oil passages and provides direct flow from the block. In

doing so, engineers eliminated the need for oil lines, increasing reliability and durability. Oil is fed and drained directly from the block mount. This feature also aids in packaging the engine into the vehicle and serviceability. The L65 in the GMT 600 features a new case, intake system, turbo and drain system, exhaust system, cylinder head and water crossover with dual thermostat.

**Fuel-manager filter system** - Each of GM's diesel engines feature the fuel-manager filter system. This system is a double-filtration fuel filter that incorporates the filter, a water separator and a fuel heater all in one canister. The top-load vertical design and location simplify filter cartridge replacement.

**Common serpentine accessory belt drive** - The 6.5L V8 diesel engine features a single serpentine belt for all the driven components. Its automatic tension adjuster improves belt life and makes servicing easier, too. This system features water crossover, full-blocking thermostats, water outlet and bypass hose, fuel return tube, front lift hook and vacuum pump mount and hose.

**Fuel economy** - Among the many superior characteristics of the 6.5L turbo is its exceptional fuel economy. When matched against a comparable performing big-block V8 gasoline engine, this diesel has the potential for 25 to 80 percent better fuel economy. The improved fuel economy is a result of precise control of combustion and more precise transmission control, both due to electronic control.

**Crankshaft bearings** - The crankshaft bearings used in the 6.5L are made of a fatigue-resistant material that promotes a higher bearing stress life. The rear crankshaft seal is in one piece to reduce the chances of leakage.

**Bulkhead** - The 6.5L diesel engine bulkhead area was designed to handle the higher-cylinder firing pressures of a turbocharged engine. In addition, the coolant passages and the oil galleries were sized to provide the increased flow required by a turbo engine.

**Combustion chamber** - To provide smokeless performance and meet stringent emissions standards without sacrificing power, the 6.5L was designed with an optimized combustion chamber. This design provides an optimum balance of air in the prechamber, head and cylinder that ensures a more even and complete burning of fuel.

**Modulated exhaust gas recirculation system** - In addition to having an optimized precombustion chamber, the 6.5L L56 turbo engine utilizes an electronically controlled modulated exhaust gas recirculation system. This allows for more precise control over the flow of exhaust gas and also helps to meet stringent emissions standards.

**Adaptive cylinder balance** - Adaptive cylinder balance is included on the 6.5L turbo diesel. This process measures the horsepower of each cylinder at idle and directs fuel to each cylinder accordingly. This results in smoother operation of the vehicle by minimizing the vibration of the engine.

**Cylinder block** - The cylinder block has been modified to incorporate piston spray cooling for increased engine life. This was accomplished by installing spray nozzles in the bulkhead to direct a spray of oil at the underside of the piston. To ensure sufficient oil pressure during all running conditions, an increased flow oil pump and lubrication system was incorporated. In addition, the oil cooler lines and oil coolers were increased in size to provide a 100% increase in flow through the oil cooler.

**Cooling system** - The cooling system has been upgraded with an increased flow water pump and new water crossover and dual full-blocking thermostats.

# Vortec 7400 V8

L29

*"The amazing thing about this big block is that it didn't really start showing its muscle until about 3600 rpm, which is peak torque... The 40-to-60 mph acceleration time is half-- HALF! -- that of the old engine. I've never seen such a dramatic change made from one year to the next using the same engine!"*

# Vortec 7400 V8

## L29

---

### Features and Benefits

**Sequential port fuel injection** - GM's 7400 L29 has sequential port fuel injection. SPFI is a highly efficient fuel-delivery method that improves cold start and hot engine restart, and takes fuel control to "world-class." SPFI is also a major contributor to increased horsepower. To summarize, SPFI – precise, high-pressure fuel delivery – helps the 7400 engine achieve its maximum power and torque in an efficient manner that does not sacrifice fuel economy.

**Intake manifold** - The air intake manifold of the L29 is comprised of an upper and lower aluminum assembly. The design of the intake manifold reduces emissions through its consistent cylinder-to-cylinder air-flow distribution. Long runners enhance low-end torque while being fed air from a plenum designed to reduce induction noise. It also features a separate throttle.

**On-Board Diagnostics Second Generations (OBDII)** - As with all GM vehicles, the L29 is OBDII compliant. This required significant enhancements to the vehicle control module (VCM). The VCM, a highly sophisticated on-board computer and one of the industry's most powerful, now monitors a wide variety of emissions systems and components for the slightest level of deterioration or malfunction. This includes the fuel delivery system, catalytic converter, EGR valve and, new for 1998, the evaporative emission system. Its diagnostic tools include the oxygen sensor, crank and cam position sensors, manifold absolute pressure (MAP) sensor and manifold air temperature sensor. In addition to helping vehicles meet the more stringent emissions standards and improving overall system reliability, OBDII has some real benefits for the customer. The VCM stores and retrieves diagnostic messages to help technicians diagnose and fix rare problems more quickly and accurately. And since OBDII sets trouble codes (SERVICE ENGINE SOON light), when a system begins to deteriorate rather than waiting for a complete system failure, drivers can bring their vehicles in for service before experiencing a possible breakdown or more costly repair.

**Long life systems** - The L29 engine offers owners a long life ignition system that is virtually maintenance-free for 100,000 miles. This system includes platinum-tipped spark plugs with a 100,000-mile life expectancy, low resistance spark plug wires that increase conductivity and a high voltage switch that requires no timing adjustment. Engine timing is electronically controlled through the use of cam and crank sensors. Other heavy-duty systems that will help keep your truck trouble-free over the long haul include 150,000 mile long life engine coolant, a single 100,000-mile accessory belt, damperless valve springs and a robust water pump and seal. The remote air cleaner on pickup and Suburban models has a visual "filter change" signal, allowing up to 50,000 miles between air-filter changes. In addition to making the maintenance of the vehicle easier, these systems also improve idle quality, cold starts and many other reliability and durability factors.

**Cylinder head** - Air flow has been increased into the cylinder head of the L29, as has the mixture motion of the air. This flow-developed combustion chamber increases the compression ratio to 9.1:1, up from 7.9:1 on the L19. This improves thermal efficiency, performance and fuel economy without increasing octane requirements. This design optimizes air and fuel mixture for maximum horsepower and increases fuel economy.

**Valvetrain** - The L29 valvetrain retains the significant upgrades made in 1996 to enhance both durability and driveability. The steel camshaft better handles stress over the life of the engine. The L29 also

has roller lifters. This helps to reduce friction and improves wear resistance over time. Roller lifters also help to increase low-end torque while at the same time extend the dynamic operating range. Low-end torque provides the power for heavy loads and towing or trailering, while extending and flattening the torque curve helps increase the mid RPM performance. The use of lower friction roller lifters helps eliminate internal power loss and increase fuel economy.

**Camshaft profile** - The camshaft profiles are designed to take advantage of the stronger capabilities of the steel cam which is used with roller lifters. This provides excellent low speed torque, improves idle smoothness, generates good dynamic range and results in improved specific output power and torque.

**Mass air flow meter** - Thanks to mass air flow metering, engineers have taken the guesswork out of air flow measurement. This more precise air flow metering system accurately measures air flow, helping to eliminate the variability in a number of conditions, including changes in altitude and temperature. It also provides improved smoothness for 0 - 60 mph and 50 - 70 mph accelerations.

**Crankshaft position sensor** - The crankshaft position sensor is an achievement in diagnostic technology that allows the vehicle control module (VCM) to know the exact relative position in time of each piston with respect to its combustion event. This allows accurate spark timing and also aids in the detection of misfire. It helps to ensure that the engine is performing at its optimum efficiency.

**Exhaust manifold** - The exhaust manifold for the 7400 truck engine (L29) is a high-silicon moly (molybdenum) material that provides long life and higher engine performance capabilities, and improves tailpipe emissions. The Exhaust Gas Recirculation (EGR) take-off point was established so that EGR can be evenly distributed to enhance cylinder-to-cylinder operations. This will enhance the engine's driveability and emissions capability. The internal shape of the exhaust manifold was computer designed and visually flow-checked to maximize flow efficiency. The exhaust manifold material of high silicon moly substantially improves the durability of the manifold even under increased performance levels of the engine, and allows the manifold to remain stable and distortion free throughout its life. The exhaust manifold features a three-bolt take-down flange to reduce leakage, and the entire exhaust system is built of aluminized stainless steel. All of these features, along with a lower back-pressure design, result in a durable exhaust system that facilitates maximum air flow through the engine resulting in enhanced engine power.

**Noise reduction** - Noise reduction was a major goal of the L29 truck engine program and has been achieved through enhancing stiffness in several areas. The accessory drive has a stiff mounting and a serpentine drive belt reduces noise and facilitates engine maintenance and vehicle packaging. The L29 also has a computer designed piston contour. This contour allows for less piston to bore clearance, reducing piston cold-start noise. Exhaust noises have been reduced, thanks to the use of dual wall stainless steel gaskets. Induction noise is addressed with a large inlet manifold plenum feeding equal length runners. The plenum draws filtered air from a remote composite air cleaner. Add a rigid cast aluminum front cover and tangentially mounted compressor, and you're ready for a quiet, vibration-free ride.

**Quarter-wave tuner and resonator** - On C/K platforms, the 7400 V8 (L29) provides drivers a smooth, quiet ride, thanks to sophisticated technology called a quarter-wave tuner and resonator. Together, the tuner and resonator cancel induction noise by generating an identical frequency that is out of phase with the offending frequency. This provides drivers with a quiet vehicle, reducing annoying induction noise, particularly when towing heavy loads.

**Cooling system** - The 1998 L29 retains the improved cooling system developed for 1996 models. This system features a controlled by-pass thermostat that enhances overall system performance. It improves bank-to-bank coolant flow balance, expedites warm-up and overall heater performance, and channels air

flow through the radiator once the engine is warm, thereby improving cooling. This also improves the water pump bearing life. Radiator nipples, hoses and clamps have been sized to meet maximum sealing and long life objectives.

**Linear EGR valve** - The linear exhaust gas recirculation (EGR) valve is another GM-pioneered production design that provides accurate EGR control for improved fuel economy and emissions. The computerized engine control module precisely positions the valve for exact introduction of EGR throughout the entire engine operating range.

**Fuel economy estimates** - The 7400 L29 is expected to better the fuel economy of its L19 predecessor, from five to 10 percent, depending on load and driver habits.

# PICKUP TRAILERING

Maximum gross trailer weight is calculated assuming the driver and one passenger are in the tow vehicle and it has all required trailering equipment. The weight of additional optional equipment, passengers and cargo in the tow vehicle must be subtracted from the maximum trailer weight. C/K Pickups with rear step bumper and hitchball OR weight distributing hitch platform without equalizer bars & snap-up brackets are limited to **5000 lbs MAX trailer weight with a 500 lb tongue load**. Properly equipped vehicles may exceed this rating as indicated in the following chart.

1. Trailer ratings are reduced on Vortec 4300 V6 and Vortec 5000 V8 gasoline engines with a manual transmission as indicated in parenthesis ( ).

**NOTE:** Any C/K Pickup can tow a 2000 lb trailer without special equipment. All C/K's towing a trailer rated over 2000 lbs require optional special equipment. Above 2000 lb trailer rating, engine oil cooler (KC4) is required on models with gas engine and 3.08 or 3.42 axle ratio. Engine oil cooler is standard on all other models. Transmission oil cooler is standard on models with an automatic transmission. Additional air-to-oil cooler (KNP) is standard on models 8600 lb GVWR (or more), models with HD transmission (MT1), or with Z82 heavy duty trailering package (with Vortec 5700 V8 and 3.42 or 3.73 axle ratio only). KNP is available on other models. An 8-wire trailer wiring harness is standard on all models. A weight distributing hitch platform, sway control and equalizer bars with snap-up brackets are required when trailer weight exceeds 5000 lbs with a 500 lb tongue load. Heavy duty shock absorbers (F51) or gas-charged Bilstein shock absorbers (FG5) are required on C1500 models; off-road chassis package (Z71) or heavy duty shock absorbers (F51) are required on K1500 models for trailer weights above 5000 lbs with a 500 lb tongue load. Z82 heavy duty trailering package includes weight distributing hitch platform and where required: engine oil cooler (KC4), transmission oil cooler (KNP), and heavy duty shock absorbers (F51).

C3500HD (2WD)							12000	4000	4.63
Chassis-Cab							12000	4000	5.13

1. C/K1500 models are rated for fifth-wheel trailering with automatic transmissions only. Kingpin weight cannot exceed available payload. To determine payload capacity, subtract vehicle weight plus passengers and cargo from GVWR. C/K1500 pickup model ratings may be limited by insufficient payload for kingpin weight.

**NOTE:** Engine oil cooler (KC4) is required on models with gas engine and 3.42 axle ratio. Engine oil cooler is standard on all other models. Transmission oil cooler is standard on models with an automatic transmission. Additional air-to-oil cooler (KNP) is standard on models 8600 lb GVWR (or more), models with HD transmission (MT1), or with Z82 heavy duty trailering package (with Vortec 5700 V8 and 3.42 or 3.73 axle ratio only). KNP is available on other models. An 8-wire trailer wiring harness is standard on all models.

## PICKUP TRAILERING (continued)

Maximum gross trailer weight is calculated assuming the driver and one passenger are in the tow vehicle and it has all required trailering equipment. The weight of additional optional equipment, passengers and cargo in the tow vehicle must be subtracted from the maximum trailer weight. C/K Pickups with rear step bumper and hitchball OR weight distributing hitch platform without equalizer bars & snap-up brackets are limited to **5000 lbs** MAX trailer weight with a **500 lb** tongue load. Properly equipped vehicles may exceed this rating as indicated in the following chart.

C/K MODELS (DIESEL-POWERED) - TRAILERING		BALL-HITCH			FIFTH-WHEEL

C3500HD (2WD)		9000	1000	4.63	9000	4000	4.63
Chassis-Cab		10000	1000	5.13	10000	4000	5.13

**NOTE:** Any C/K Pickup can tow a 2000 lb trailer without special equipment. All C/K's towing a trailer rated over 2000 lbs require optional special equipment. Engine oil cooler is standard on models with a diesel engine. Transmission oil cooler is standard on models with an automatic transmission. Additional air-to-oil cooler (KNP) is standard on diesel models. An 8-wire trailer wiring harness is standard on all models. A weight distributing hitch platform, sway control and equalizer bars with snap-up brackets are required when trailer weight exceeds 5000 lbs with a 500 lb tongue load. Off-road chassis package (Z71) or heavy duty shock absorbers (F51) are required on K1500 models for trailerweights above 5000 lbs with a 500 lb tongue load. Z82 heavy duty trailering package includes weight distributing hitch platform and heavy duty shock absorbers (F51) where required.

**ADDITIONAL NOTES ON FIFTH WHEEL TRAILERING:** Kingpin weight cannot exceed available payload. To determine payload capacity, subtract vehicle weight plus passengers and cargo from GVWR.

Maximum gross trailer weight is calculated assuming the driver and one passenger are in the tow vehicle and it has all required trailering equipment. The weight of additional optional equipment, passengers and cargo in the tow vehicle must be subtracted from the maximum trailer weight. S/T Pickups with rear step bumper and hitchball OR weight distributing hitch platform without equalizer bars & snap-up brackets are limited to **3500 lbs** MAX trailer weight with a **350 lb** tongue load. Properly equipped vehicles may exceed this rating as indicated in the following chart.

### S/T MODELS - TRAILERING

ENGINE TRANSMISSION	MODEL	Vortec 2200 L4 Automatic or Manual			Vortec 4300 V6 Automatic ( Manual ) <sup>1</sup>		
		MAX Trailer Weight (lbs.)	MAX Tongue Load (lbs.)	Required Axle Ratio	MAX Trailer Weight (lbs.)	MAX Tongue Load (lbs.)	Required Axle Ratio
	<b>S10 (2WD)</b> Reg.-Cab/Ext.-Cab	2000	200	3.73	4500(3500)	550(450)	3.08
		2000	200	4.10	5500	650	3.42
	<b>T10 (4x4)</b> Reg.-Cab/Ext.-Cab	not available			4500(3500)	550(450)	3.08
					5500(4000)	650(500)	3.42
					5500(4500)	650(550)	3.73

1. Trailer ratings are reduced on models with a Vortec 4300 V6 engine and manual transmission as indicated in parenthesis ( ). Some models may exceed the minimum GVW Rating when loaded with driver, passenger, and MAX Tongue Load.

**NOTE:** Any S/T Pickup can tow a 2000 lb trailer without special equipment. Above 2000 lb trailer rating, an increased GVWR (Z85) is required on 2wd models. Engine oil cooler and transmission oil coolers are standard on models with a Vortec 4300 V6 engine. A weight distributing hitch platform, sway control and equalizer bars with snap-up brackets are required when trailer weight exceeds 3500 lbs with a 350 lb tongue load. A trailering package or trailer wiring harness is not available from the factory.

**ADDITIONAL NOTES ON FIFTH WHEEL TRAILERING:** Fifth-wheel trailering requires Vortec 4300 V6 and increased GVWR package. Kingpin weight should not exceed available payload capacity.

# GCWR SELECTOR FOR TRAILERING APPLICATIONS

You can use the GCWR (Gross Combination Weight Rating) Selector below to determine the engine and rear axle ratio required to tow a specific trailer with your new Chevy Truck. The chart shows the maximum allowable GCWR based on all the available truck engines and rear axle ratios with automatic or manual transmissions. The GCWR includes the total loaded weight of both the truck and the trailer. Any available engine may be used for trailering if the GCWR shown is not exceeded.

To attain GCWR, vehicle must have all required trailering equipment. Equalizer bars and snap-up brackets required for trailer weights above: 5000 lbs (C/K), 4000 lbs (G-van), 3500 lbs (S/T), and 2000 lbs (M/L & U-vans).

## Automatic Transmission

GCWR (lbs.)	6000	6500	8500	9000	9500	10000	10500	11000	11500	12000	12500	13000	13500	14500	15000	16000	17000	19000
Engine <sup>1</sup>	Rear Axle Ratio																	
Vortec 2200 L4	4.10																	
3400 V6 <sup>2</sup>	3.29																	
Vortec 4300 V6 <sup>3</sup>			3.08	3.23	3.42	3.73	4.10	4.56										
Vortec 5000 V8					3.08		3.42		3.73									
Vortec 5700 V8						3.08		3.42		3.73			4.10		4.56			
6.5L Turbo-Diesel V8								3.08		3.42		3.73		4.10		4.56	5.13	
															4.63			
Vortec 7400 V8													3.42		3.73		4.10	4.56
																	4.63	5.13

1. Chevy trucks with GVWR's at or above 8600 lbs have HD (Heavy Duty Emissions) engines (except 7400 V8). Model and driveline combinations must be verified by your local Chevrolet dealer for correct emissions equipment.
2. Front axle ratio for Venture Minivan.
3. GCWR reduced 500 lbs for ALL S/T models & reduced 1000 lbs for S/T models with ZR2 Suspension Package. Maximum GCWR for S/T models is 9500 lbs.

## Manual Transmission

Manual Transmission																	
GCWR (lbs.)	5000	5500	6500	7000	7500	8000	9000	10000	11000	12000	13000	13500	14500	15000	16000	17000	19000
Engine¹	Rear Axle Ratio																
Vortec 2200 L4	3.73	4.10															
Vortec 4300 V6⁴			3.08	3.42	3.73	4.10	4.56										
Vortec 5000 V8				3.08		3.42	3.73										
Vortec 5700 V8								3.08	3.42	3.73		4.10		4.56			
6.5L Turbo-Diesel V8									3.08	3.42	3.73		4.10		4.56 4.63	5.13	
Vortec 7400 V8												3.42		3.73		4.10	4.56 4.63 5.13

4. GCWR increased by 1000 lbs on ALL S/T models.

## TRAILERING ELECTRICAL INFORMATION

### TRAILER HARNESS RELEASE

Model	Standard	Optional
Tracker	N/A	N/A
S/T Pickup	N/A	N/A
Blazer	6-wire	8-wire (UY7, comes with Z82)
C/K models	8-wire	N/A
Venture Van	N/A	5-wire (comes with V92)
Astro Van	6-wire	8-wire (UY7, comes with Z82)
G Vans*	N/A	8-wire (UY7, comes with Z82)

\* Does not include G3500 RV Cutaway Van.

### TRAILER HARNESS WIRE COLORS

Blue	electric trailer brakes or auxiliary wiring
Red or Orange*	battery charging
Lt. Green	backup lamps
Brown	tail and running lamps
Yellow	left turn signal, stop, hazard lamps
Dk. Green	right turn signal, stop, hazard lamps
White (thin 20 g.)	center mounted stop lamp
White (thick 10 g.)	ground

\* To provide battery charging to the trailer, place ring terminal on red (or orange) wire over terminal "B" junction block stud.

## VEHICLE TO TRAILER ELECTRICAL SYSTEM SETUP

**Junction Block Location:** C/K & G--Underhood electrical center stud, left rear corner behind washer bottle. BLAZER--Electrical center near left front fender. ASTRO--Front of dash, left side under steering column.

**Brake Pedal Switch Splice Location:** ALL--Under dash at brake pedal switch (white wire).

**Interior Ground Location:** ASTRO--Under left side trim panel. Use self tapping screw & ring terminal to plenum side panel. ALL OTHERS--No interior ground, use engine block or negative battery terminal.

**Forward Trailer Harness Location:** ASTRO--ORG & BLU, strapped together under dash. BLAZER--RED & BLU, strapped together in engine compartment near electrical center. C/K & G--ORG (C/K) or RED (G) & BLU, strapped together in engine compartment near brake booster.

**Rear Trailer Harness Location:** C/K PU--ORG, BLU, WHT (cmsg), taped left frame rail; Other 5, in front of center rear bumper. C/K UTL--inside lower left quarter panel, cut straps & route over frame rail. M/L & G--inside vehicle, right rear corner above jack. BLAZER--inside left frame rail.
